

a A live PTPRC query separates the current view from database-wide evidence

ENSG00000081237

PTPRC · ENSG00000081237 · chr1:198,638,457-198,757,476 · 317 junctions

b Shared cell-type UMAP

Harmonized cell-type annotation

71,913 sampled cells · shared coordinates
Median-coordinate labels · no trajectory inference

c ENST00000367364 localization

Isoform expression

57,185 molecules · native 0-5 long-read molecules
Usage: Monocyte 0.59 · Plasma 0.59 · Progenitor 0.17

d ENST00000697630 localization

Isoform expression

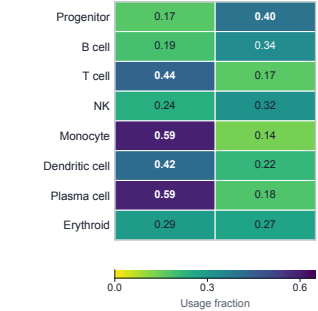

25,697 molecules · native 0-3 long-read molecules
Usage: Progenitor 0.40 · B cell 0.34 · Monocyte 0.14

Expression UMAPs localize the contrast; panel e quantifies DTU. Matched coordinates; compare spatial distribution, not native color intensity.

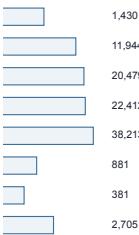

e Usage fractions and study-stratified DTU

CELL-TYPE DTU · $q = 0.00088$ · effect = 0.338 · 23 isoforms

Targeted DTU: CCUS $P=0.0099$, $\Delta=0.37$ · myeloma $P=0.0001$, $\Delta=0.31$
Signed cell-type contrasts: $p=0.29$ · sign agreement=62%

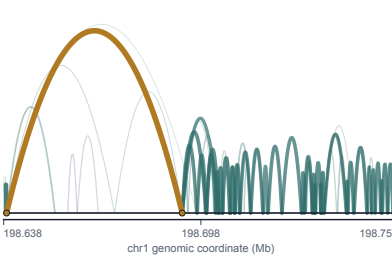

All 23 molecules

f Junction evidence remains inspectable and exportable

LIVE TABLE · 100 rows shown / 317 filtered

+ strand − strand selected example width / opacity scale with log10(molecules)

Gold arc is a display example; selecting any arc exposes molecules, reads, runs and studies

SELECTED ARC · DISPLAY EXAMPLE

chr1:±
198,639,341–198,692,347

MOLECULES	READS
201,317	518,892
RUNS	STUDIES
47	8

row: live table · overview · frozen snapshot

Fractions use all 23 isoforms; q/effect summarize the gene-level test
